E-LOGISTICS

100 % ELECTRIC

100 % EMISSION-FREE

100 % POWER

DEAR CUSTOMERS,

at Quantron AG, we provide you with innovative and practicable e-mobility solutions for inner-city and regional truck traffic.

We provide a solution for all craft and transport companies affected by driving bans and higher charges. The same applies to companies working in passenger transport, on airports and with our e-waste/recycling vehicles we offer communal transport solutions. We can serve all of your needs - today!

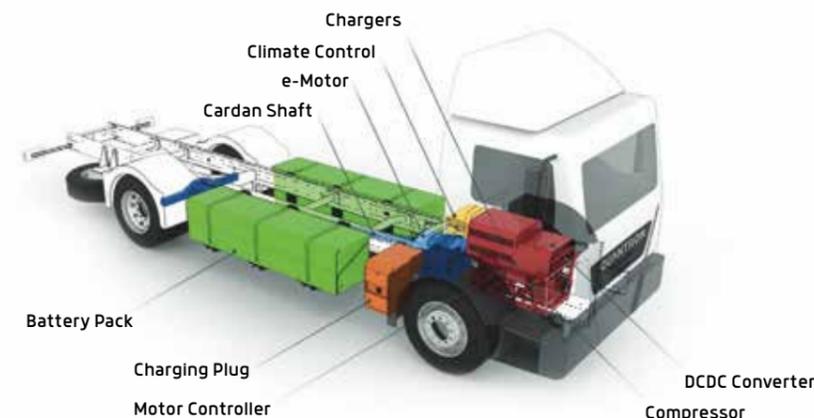

Thanks to our own e-engineering and our e-battery division, we are able to develop and implement individual solutions for you. Get in touch today and we walk you thru from the first to the last step!

Best regards,

Your Andreas Haller | CEO Quantron AG

QUANTRON E-LOGISTICS

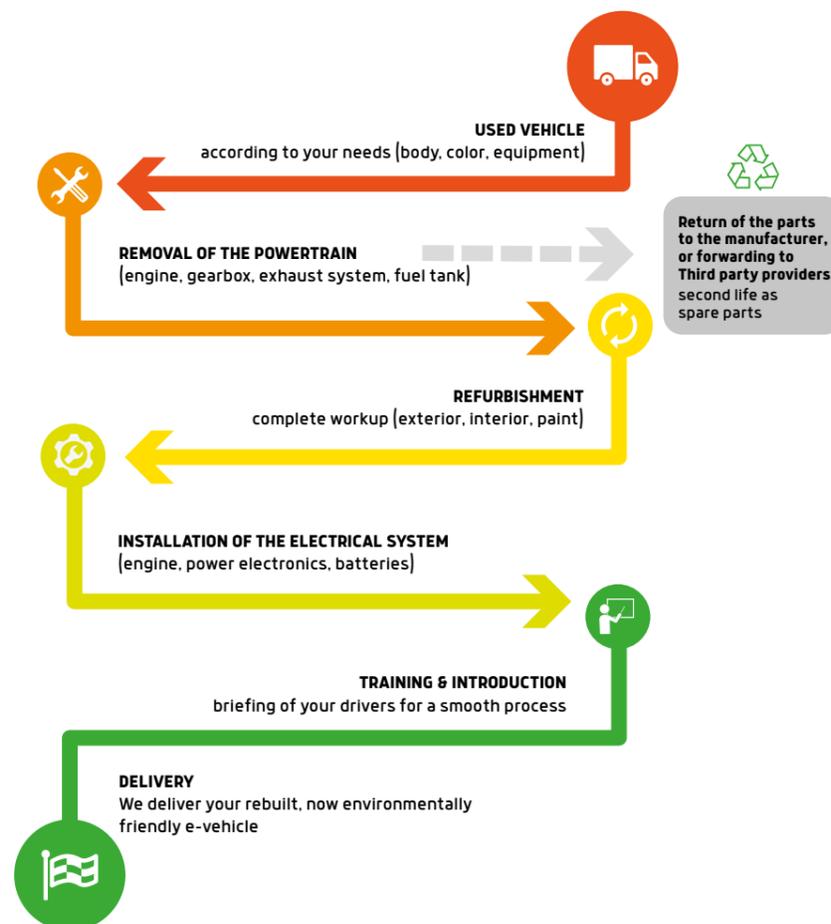

THE FUTURE STARTS NOW! E-MOBILITY FOR YOUR DAILY LOGISTIC BUSINESS.

NEW, STOCK OR USED

Quantron AG offers you field-tested, state of the art and emission-free solutions for your transport of goods or passengers. Here we have different approaches: either we convert and electrify your existing vehicle or we take a young used one from the market. Otherwise we electrify a brand new vehicle - everything according to your individual requirements and wishes.

OUR SUSTAINABILITY CONCEPT - REMANUFACTURING

THINK GREEN

Second Life Vehicle

We give used vehicles and buses a second, environmentally friendly life. A high potential for climate protection and resource management.

Second Life Battery

Once the batteries reach their physical end as a traction system, we reuse them as energy storage solution (e.g. as energy storage in combination with photovoltaic, for charging e-vehicles and trapping power surges).

DRIVE

Quantron offers the optimum drive profile for a wide variety of logistic vehicles. From vans with 3.49 t to 7.2 t, through the mid-range from 7.5 t to 18 t total weight up to the heavy section from 26 t to 44 t, individual solutions are available for a safe transport. Efficient and economical: the emission-free drive is individually adapted to the transport task, use of recuperation as braking energy and elimination of the previously usual time-consuming maintenance work.

APPLICATION / DRIVING EXPERIENCE

The Quantron trucks are quiet in operation and absolutely emission-free. The drivers, employees in goods distribution centres, people in the city centres and personnel in the loading and unloading areas are less burdened by noise and air pollution. The good torque development of the electric drive and the simple operation of the e-truck support the driver optimally. Useful additional equipment, such as the GPS tracking, enables a controlled and uncomplicated operation of the electric vehicle fleet.

CHASSIS

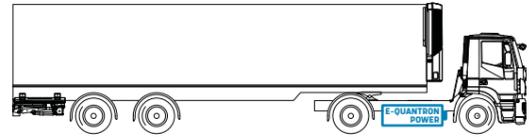

Together with you, Quantron will configure the chassis that best suits your requirements, incorporating your fleet expertise. The requirements for payload, driving performance, range, body configuration and maneuverability are taken into account individually.

BATTERY

Your Quantron truck is equipped with modular battery packs. By analyzing your specific mission profile, we configure the ideal battery capacity for your application. This results in the required ranges with optimal loading times and necessary payload.

E-CITY LOGISTICS

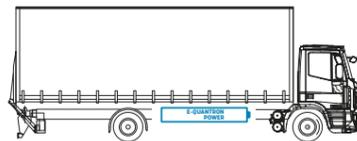

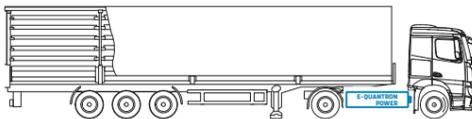

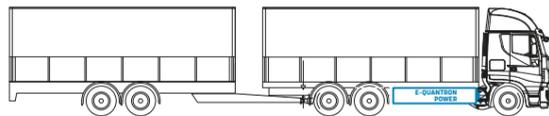

Power: 80 - 550 kW Battery: 80 - 630 kWh
Range: up to 500 km 3,49 t - 44 t

Our society is developing a growing environmental awareness. People are suffering from bad air and traffic noise from vans and trucks. The policy is reacting with driving bans and higher taxes. Whether craftsman business, parcel service provider or food distribution, everyone is affected as soon as you have customers or deliveries and pick-ups in urban or noise-sensitive areas.

With our practical, high-performance electric vehicles, you drive quietly and emission-free, supply your existing customers without restrictions and also win new customers (upgrading your own brand image). You also create a better working environment for your employees.

E-PLANT LOGISTICS

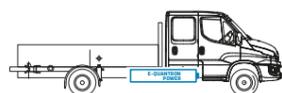

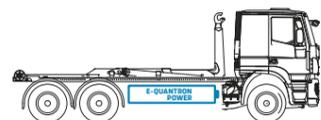

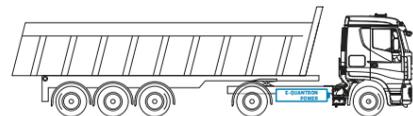

Power: 235 - 550 kW Battery: 130 - 630 kWh
Range: up to 500 km 12 t - 26 t

Especially in the field of plant logistics, the electrification of vehicles makes absolute sense. The quiet and emission-free transport not only improves the living conditions of the residents on the access roads to industrial estates, but above all the working conditions of the plant employees. Whether employees or goods are transported on the company ground or parts are transported from supply centres to production lines and finished components are shipped, the vehicles cover the same distances every day.

Normal diesel trucks are rather unsuitable for these distances of mostly a few kilometres with frequent stops. They do not reach the necessary operating temperature to comply with the exhaust emission standard. Consumption and wear also increase. The e-vehicles have distinct benefits: the performance is perfect for all transport conditions, the battery capacities are dimensioned cost-efficiently, the option for intermediate charging exists during loading and unloading activities, the maintenance and operating costs as well as the wear are lower.

E-PORT LOGISTICS

Power: 80 - 550 kW Battery: 80 - 630 kWh
Range: up to 500 km 3,49 t - 44 t

This segment covers a broad spectrum of transport tasks, including unit, bulk and container goods: for example, transport between port cranes and your own or customer storage locations, delivery of goods to distribution centres, delivery directly to and collection from customers. The vehicles for the transport missions must be powerful and reliable.

Whether it's a van, tractor, trailer or swap body, Quantron trucks are equipped with the fitting drive solution and battery configuration to fulfill your individual demands. Your advantages: among other things, the maximum torque is available right from the start, lower maintenance and operating costs compared to classic diesel trucks, no long downtimes due to costly maintenance work (e.g. no classic oil and filter exchange and cleaning of the exhaust system), everything is transported quietly and emission-free (new, more efficient processes possible e.g. in warehouses).

Q-Benefit

Ecological and economical: everything from a single source, cost savings, ideal for stop and go applications, new delivery potentials, more efficient processes, better working environment.

Q-Consult

Individual analysis of the status quo: vehicles, cargo, route profiles, range, charging infrastructure, energy concepts, Performance audit: cost analysis [expenditure, savings], government subsidies, financing, Application of the individual possible subsidy.

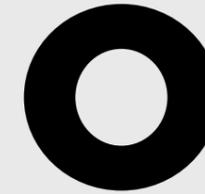

Q-Truck

Sector solutions according to the individual mission profile: model, construction, equipment, performance, range. Due to our own e-engineering we are able to create special solutions.

Q-Emotion

Conservation of resources thanks to remanufacturing. Quiet and emission-free driving. Max. torque right from the start. Compensation of CO2 emissions of the battery production by the conversion of used and stock vehicles.

FIND YOUR E-SOLUTION

Q-Power

Battery solutions for every requirement. We find the suitable battery capacity and put together your individual battery configuration. Very high availability.

Q-Experience

Over 136 years of experience in the commercial vehicle business out of the Haller Group.

We know the vehicles, the market and requirements.

Q-Service

The focus is set on economic efficiency, flexibility and mobility for the customer. Service, maintenance and repair with reliability and quality at over 700 service points all over Europe.

Q-Finance

Individual solutions for purchase, financing and leasing in order to be cost-efficient on the road with your Q-Truck.

Q-Charge

Green power and intelligent charging solutions (charging stations at your company and e.g. at unloading points for intermediate charges on the way) to increase efficiency and to minimize charging times and costs.

QUANTRON NETWORK: STRONG TOGETHER

Combined quality for your commercial vehicles in more than 700 service centers throughout Europe!

Alltrucks Truck & Trailer Service - that's our answer for your commercial vehicle service. As a partner of the full-service workshop concept of the three leading suppliers Bosch, ZF and Knorr-Bremse, we offer you quality and competence at the highest level. For the service, maintenance and repair of your entire commercial vehicle fleet. Whether transporter or truck, whether MAN, Mercedes, Scania, IVECO or DAF, we support and help you, so that you can concentrate on the essentials: the problem-free processing of all your orders.
